By February 3, 2020

Honors Biology is an intensive study of the diversity of life. We will focus on organic chemistry, cells, genetics, evolution, organism structure and function and ecology. In this course students will be required to participate in labs to support their learning, organism dissections and will be required to complete a project for each term. This class is a high school class so you will be expected to work hard, study, be willing to listen and learn at a high school level. **Typically if you take this class in 9th grade you will be taking chemistry and physics your sophomore and junior years.**

Name of Applicant:_____

B + or better for all terms of 8th grade science _____

GPA requirement is 3.6 or higher. Students Current GPA _____ (Attach Printout)

Describe in detail why you should be taking Honors Biology, including how taking this class now will help you in your future: _____
